Our editors independently research, test, and recommend the best products; you can learn more about our review process here. We may receive commissions for purchases made from our chosen links. Our best results: Kaspersky General Security at AmazonSecurity combines traditional scanning with advanced behavioral surveillance. Best budget: Microsoft Defender in MicrosoftDefender is part of Windows 10 and is already installed and running. Best for Home & Business: Trend Micro No worries on AmazonSeing the best aspects of home and business malware protection. Best for easy use: AVG Free on AVG One of the best interfaces in the free antivirus space. Best for multiple devices: Bitdefender Premium Security at Amazon Excellent protection against malware, hacking and who knows what's next. Best for customization: Avira Prime in AviraAlly allows you to customize your security by adding to various security options. Best device costs: Zemana Premium in ZemanaUses neural scanner and machine learning to find and remove the latest threats. Best for research: Avast Free on Avast Comes with things that others charge for, such as a Wi-Fi vulnerability scanner and password manager. Best cross-platform protection: TotalAV Ultimate in Total AV A program that can be your family's malware against an attack. With some of the best malware protection available, Kaspersky Total Security combines traditional scanning with advanced behavioral monitoring and cloud analysis to make computing as safe as possible today. Not only can it capture and neutralize the worst that the web has to offer, but it can quickly scan throughout its system, looking for threats to neutralize. In addition to everything from password manager and parental controls to ransomware backups and killed utilities, Total Security can protect PC computers, Macs, iPhones, iPads and Androids from attack. Kaspersky recently added two-factor authentication to its online accounts for multilayered security. It does not reach in several areas, though, like doing without an unlimited virtual private network (VPN) for ultra-secure communications. Plus, for those concerned about dealing with a viral attack late, Kaspersky's lack of 24/7 phone support is connected. With its advanced malware protection, fast scanning and on-board coverage, Kaspersky Total Security provides the best security you can get today, period. Microsoft defender can protect your PC from all kinds of threats without even thinking about it because Defender is part of Windows 10 and is already installed and running. By combining the best aspects of local and online protections, Defender is all the most users will need to keep their computer safe and secure. You may not some of the bells and whistles that provide the full security packages, such as access to a virtual private network (VPN) or system optimizer, but Defender can protect your cyber home with a firewall and browser-based password manager. It makes straight without not noting it. The protection is exceptional and improving thanks to machine learning technology, which becomes better at identifying bad elements as it acquires more real experience. Unlike some of its colleagues, Microsoft offers 24/7 support for its product. By combining the best aspects of protecting home and business malware, Trend Micro has carefree business security more than life to its name. The hybrid of consumer protection and endpoint security, the protection that business security concerns provides protection without interfering. With control over almost every aspect of its defense, troubled business security combines a local agent with a powerful online dashboard. The program can protect itself from everything from ransomware and attacks without files to script exploits and even traditional worms, Trojanhorses and phishing attempts. Carefree business security adds something users' malware protection can't match: The ability to track an attack with a complex investigation that provides detailed analysis. It can track the vector of the attack, what files have been changed and how to stop a repeat of the attack. The company provides 24/7 support to help make the most of business security concerns. Antivirus free MOBilyation. AVG Mobilation With one of the best interfaces in free antivirus space, AVG Free is not only a lot of protection for nothing, but is one of the easiest malware programs to learn and use. Its screens are simple and attractive, show whether the computer has been compromised and provide instant access to the most used items, including the virus scanner, online security, and the program's add-on set. While AVG Free has the power to stop viruses, spyware, ransomware and other threats in their tracks, it can also protect against phishing attempts to hide email attachments and address performance issues. Moreover, almost every aspect of AVG Free protection is customizable to reflect your style of work. AVG maintains its defense in a hostile world, often updating its program and database to counter the most pressing threats. There are many DIY items on the AVG support site, but you are alone because AVG Free lacks 24/7 support. Today there is a great chance to have several computers, tablets and phones at home that need protection? And Bitdefender's Premium Security can protect them with excellent protections against malware, hacking and who knows what's next. The program not only does the basics of security well, but includes the best set of security features, including password manager, parental control, file encryption and shredding, as well as protection against the presence of a webcam or microphone hijacked. This is the rare security package that involves unlimited use of virtual network (VPN) so that your data can fly under the radar of hackers. By including priority support with Premium Security, Security, you will not waste time waiting for help. Don't let Bitdefender's steep price tag for 10 Premium Security systems fool you, it's often severely reduced and ultimately costs less per computer to protect than its competitors' set of leading security systems. While Avira's Free Security Package offers basic security and not much more, you can add a wide variety of options by adding your options one by one or by upgrade to the basic package. In addition to a software update, security for threats that are hidden in email attachments, firewall, and alerts for sites known to spread malware, it has a backup program. Avira Prime also lets you customize your security by adding to a variety of security options, such as VPN, network security, and privacy protection. In addition to protecting all major platforms, Prime can stop ransomware, rootkits, and phishing attempts. Avira's Home Guard helps ensure Pal's network devices and privacy can protect your online identity, the real bonus is unlimited access to phantom virtual private network for secure communications. Avira provides 24/7 support for all paid packages, but getting Prime adds VIP support that can reduce waiting times for help. Zemana's AntiMalware Premium costs \$25 per pc, which means it's half the price of other malware programs. While providing the basics, AntiMalware Premium is built around a real-time behavioral monitor that uses neural scanner and machine learning to detect and eliminate the latest threats. It can also make your web journeys safer with the browser cleanup program. Its malware scanner is one of the fastest around, but AntiMalware does without a foothold on other security packages. It cannot work with a full system scan, firewall, and virtual private network (VPN). Plus, there's no way to protect mobile devices like your family's phones and tablets. The program comes with 24/7 support. Strangely, Zemana did not provide help by phone, and his staff was not as diligent as he may have been answering questions. \$copy; Avast!. \$copy; Avast! With snails of additional utilities, features and options, Avast Free is as close to a full security package as it gets. It comes with things that others charge for, such as a Wi-Fi vulnerability scanner and password manager, but beware many of them are trial or have limitations. Avast Free effectively protects against any attacks with a multilayer security position, but free versions do without firewall and protection against webcam espionage. In other words, to get the most out of this, you may need to switch to one of the company's paid products. If this level of security becomes Many, Avast has do not disturb mode to limit interruptions during intense sessions of games or family movie nights. As is the case with other free malware programs, Avast has no personal support, which leaves you with no choice but to do it yourself with the company's support options on its own. Self. Ultimate's ability to cover the range of popular operating systems today means it's a security program for all desktops, laptops, tablets and phones at home. By providing Ultimate apps for PCs, Macs, Androids and iPhones and iPads, this is a program that can be your family's malware against attack. It can block the installation of unwanted applications and includes a firewall and real-time scanner that look for behavior changes in system files. The package also comes with Safe Site browser extensions for Google Chrome and Microsoft Edge that can block unsafe sites that have a reputation for spreading malware. In addition to performance optimizer, Ultimate includes virtual private network (VPN) access and ID protection, but they cost extra. If this protection starts to feel suffocating, Ultimate Silent Mode can reduce program interruptions and intrusions. Ultimate Package includes 24/7 support, but the company is currently restricting sales of licenses that cover five or fewer computers. Our process Our writers spent 12 hours researching the most popular antivirus software on the market. Before making their final recommendations, they considered over 20 different antivirus programs in general, screening options from 14 different brands and manufacturers, read over 50 user reviews (positive and negative) and tested 9 of the antivirus programs themselves. All this research is complemented by recommendations that you can trust. Trust.
